Regula Lux

Regula Lux

Regula Lux is a lighting relay which receives a relay signal from Regula Convert, which is connected to a presence sensor. When occupancy appears Regula Lux closes the relay for 230V and the light switches on.

Relay signal from Regula convert is also send to Regula Combi via Regula Lux and Regula connect Pascal. With Regula Lux it´s easy to set on and off delay with a screwdriver after the lid has been removed. On-delay can be set between 0 and 15 seconds and off-delay 0 to 60 minutes. A green diode indicates when it´s power in Regula Lux, relay-on with red diode and delay on with yellow diode.

Wiring

Connection between Regula Convert and Regula Lux is done with 4 wired cable with RJ11 (6P4C), connection is the same as between Regula Lux and Regula connect Pascal but with an additional Regula connect Pascal adapter that fits in to Weidmüller SL 3.5 Regula connect Pascal.

Regula Lux power is powered from Regula connect Pascal, Regula Lux then power supply Regula convert and presence sensor.
