Javo Big Bale

Worry-free and efficient substrate dosing

This dosing unit can process substrate or bark from big bales without problem. The electrically powered pivot system allows the bale to be tilted steplessly and safely and the environment stays clean.

The Javo Big Bale is easy to use and is maintenance free. The machine is easy to move with a forklift truck. Optionally, the Javo Big Bale can be fitted with wheels making it easier to move using a pallet truck.

How does the machine work?

Automatic dosing feeds the desired amount of material straight to the discharge outlet.

The feed chain scrapes the soil loose from the big bale and feeds it in. As standard the machine is fitted with an adjustable fluffing mechanism to bring the substrate to the desired degree of roughness. A level regulator with three adjustable measuring points is fitted underneath the discharge outlet which controls the supply of soil to the connected machine as required.

Javo Big Bale

Advantages

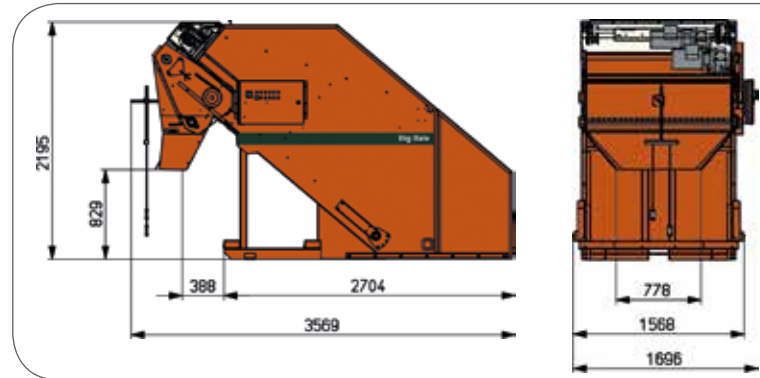

- Simple operation
- High quality chain and sprockets
- Accurate substrate dosing
- Suitable for all standard big bales
- Maximum retention of structure, volume and aeration
- Safe set-up due to integrated pivot system
- Low maintenance
- Level regulator for automatic dosing
- Sprung safety cover for irregularities in potting soil, adjustable per product

Available options

- Suitable for potting soil and bark in various types of packaging
- Moveable design
- Water dosing system
- Heightening set (350mm)
- Available in any RAL colour

Technical specifications

Suitable for:	all standard big bales
Length:	3,570mm
Width:	1,700mm
Height:	2,200mm
Weight:	1,380kg
Voltage:	400V 50Hz / 220V 60Hz
Power:	2.25 kW
Connection:	16A, 5 pole CEE plug
