

PRACTICA DUO

Transplanting machine model Practica Duo. Among the most important features that characterise this transplanting machine we would like to underline the extreme precision of the transplanting of pyramidal, conic soil blocks, in a word modules, the outstanding performance on any kind of soil and the possibility to mount the machine in a fix or in a collapsible frame. Moreover the parallelogram structure, in which the independent transplanting units are mounted, permits the transplanting uniformity, even if the soil surface is irregular. The machine is equipped with single plant tray holder and press wheels. The most important and innovative feature of Practica Duo is the elliptical shape of the double transplanting system with 12 cups that allows to every worker to feed 2 rows at the same time and so to reduce the labour. The minimum distance between the rows is 30 cm and the maximum is 80. The minimum distance between the plants is 15 cm and the maximum is 70 cm. If a right accessory is mounted with the standard equipment, the minimum distance can be 12 cm as well.

MOD.								PIANTE FILA					
					STANDARD	OPTIONAL							
PRACTICA DUO	ø max. 3 cm	1 - 4	2 - 8	140/250 cm	min. 30 cm	14 - 50 cm	12 - 70 cm	6000/7000 / h	min. 60 HP	400/900	200/350 cm	200 cm	190 cm
